

Universal Ethernet Services for Customer-Controlled Application Performance

New options in WAN services

From Masergy

Enterprises need WAN services to enhance their bottom line. Service providers are introducing new and innovative WAN service offerings that leverage user-centric multi-service routing platforms to meet and exceed enterprise service requirements.

Enterprise networks are becoming the most fundamental underpinning of business and organizational success.

The abundance of networking solutions and complexity is growing exponentially. Despite the business failures over the past few years, we see more equipment, types of equipment, operating systems, applications and network environments than ever before. Resources are becoming even more limited as enterprises strive for efficiency.

New WAN service options offer a solution.
